WAVE 07 OF 9 · VERIFICATION AGAINST WIREMOCK

End-to-end

Run the full solution against the real mocks and record the evidence.

1 task | Requires Wave 05, 06 | Unlocks Wave 08

01 02 03 04 05 06 **07** 08 09

Why this wave exists

This is the first time the real WireMock mappings are used. Failures here usually reveal contract mismatches with the fixtures or the README.

How it fits

The diagram shows this wave's tasks, the earlier-wave tasks they depend on, and the later-wave tasks that depend on them.

Hand-off. Wave 8 documents the behaviour that was verified here, not the behaviour that was intended.

Tasks

Verifying end-to-end against WireMock

`e2e-verification`

Depends on: dev-messages-endpoint, focused-tests, job-status-endpoint

Run the solution against the real mocks: docker compose up -d, start the service, post sample-event.json through /_dev/messages and confirm the gateway and broker calls in WireMock's /__admin/requests. Then upload the 10,000-row CSV, poll the job until it finishes, and check the counts against the fixture. Exercise the fault inputs from the README. Record the results in docs/verification.md.

`scripts/e2e.ts · docs/verification.md`

- [ ] The bulk job reaches COMPLETED or COMPLETED_WITH_ERRORS and its counts add up to 10,000 rows.
- [ ] Each README fault input produces the documented behaviour.
- [ ] docker compose down leaves no containers running.

Risks and decisions

- Docker must be running before docker compose up -d.
- Fixture counts are read from the CSV, not assumed. Check that the 10,000 rows sum correctly.

Verification

```
docker compose up -d
npm start
curl -X POST http://127.0.0.1:3000/_dev/messages -H "Content-Type: application/json" --data
@wiremock/__files/sample-event.json
curl http://127.0.0.1:8080/__admin/requests
docker compose down
```

Done when

1. Every acceptance box is checked and the verification commands pass.
2. The session todos for this wave are marked done.
3. The final message includes a hand-off note for the next wave.

Agent brief for this wave: AGENT.md in the same folder.
